Summary

Computer Science undergraduate with strong foundations in Python, SQL, Data Structures, and OOP. Hands-on experience in data analysis and ML through a live internship. Exploring Generative AI and LLM workflows. Seeking a career in data science, business analytics, and AI.

Education

Sardar Beant Singh State University, Gurdaspur, B.tech in Computer Science Aug 2022 – May 2026

- GPA: 7.2(Expected)/10
- **Coursework:** Database Management Systems (DBMS), Python Programming, Statistics and Probability, Machine Learning, Artificial Intelligence, Natural Language Processing (NLP), Data Visualization.

Training and Experience

Data Science Intern-QSpiders – Software Testing Training Institute (on-site) Feb 2026 – Present

- Analysed datasets using Python (pandas, NumPy) and SQL to surface trends and support data-backed decisions.
- Built and evaluated ML models (regression, classification) through feature engineering and tuning.
- Created dashboards with Matplotlib; explored Power BI and Tableau for business reporting.
- Leveraged Generative AI / LLM APIs to automate report generation and natural-language summarisation.
- Participated in Agile sprints — data-pipeline design, peer reviews, and sprint demos.

Python Programming Apprentice-Smart Future Point Coding Institute (on-site) Jun 2024 – Jul 2024

- Strengthened core Python skills — file handling, data structures, OOP — as a foundation for data science.
- Built automation scripts and data-processing utilities following clean-code best practices.

Projects

Library Management System

- Developed a full-stack Library Book Rental Management System using Django, Python, and SQLite, with models for students, books, and rentals connected through a complete checkout-to-return workflow.
- Implemented a session-based "book bag" feature enabling multi-book selection before checkout, along with dynamic search functionality across student and book records using Django ORM queryset filtering.
- Designed the application following Django's MVT architecture with a custom admin interface for record management, auto-generated unique student reference IDs, enforced data constraints, and support for book thumbnail uploads via Django's media handling.

Environment health IQ

- Developed an interactive data dashboard correlating real-time environmental parameters (temperature, humidity, AQI, rainfall) with historical disease outbreak patterns across 10 Indian cities using Python and Streamlit.
- Engineered a custom AQI calculator from scratch using EPA standard breakpoints across 8 pollutants, replacing the API's simplified 1–5 scale with a precise 0–500 score.
- Designed a rule-based disease risk scoring engine assessing risk levels for Dengue, Heat Stroke, Asthma, and Respiratory Infections from live environmental data.

Technologies

Languages: Python, SQL, HTML, CSS, Javascript

Technologies: Pandas, Numpy, Matplotlib, Scikit-learn, SciPy, Powerbi, MS Excel, MongoDB
